Orr Fellowship

EXPERTISE

Process Improvement
ROI Analysis
Lean/Six Sigma Green Belt
Forecasting

Aidan Luttrell joined the MJ team as a business analyst, Orr fellow in our Enterprise Data department. Aidan is instrumental in creating solutions that make sense of complex, ever-changing data, transforming uncertainty into practical insights. He also works on data extrapolation and validation, delivering reports that uncover meaningful trends and patterns to support our clients' strategic decision-making.

Prior to joining MJ, Aidan gained experience in a variety of internship roles at an automation machinery manufacturing company. In these positions, he negotiated rates and redlined processes within global contracts. He also strengthened his communication skills in a sales role, where he led 12 interns on a scrum team supporting more than a thousand accounts. Aidan now leverages his diverse expertise and strong attention to detail to gather feedback, continuously enhance features within our proprietary analytics platform, APERTURE®, and ensure MJ and our clients have quick and easy access to accurate, comprehensive information.

When he is not at MJ, you may find Aidan perfecting his golf swing on a local course! He also has an impressive secret talent—he can name every country in the world as long as he has an empty map in front of him.
