B.S. in Biomedical Informatics -
Arizona State University
M.S. in Applied Health Informatics
- The Johns Hopkins University
School of Medicine

FAVORITE QUOTE

"Just be yourself, there is no one better."

Molly Redman joined the MJ team as an analytics intern in our Benefits Consulting department. Upon graduating from Arizona State University, she joined our team part-time as an associate analyst while she furthered her education and earned her master's degree in Applied Health Informatics. With her advanced qualifications, she quickly rose to the role of analyst, where she collaborates closely with our valued clients to understand their strategic goals and provide them with actionable insights from our proprietary analytics platform, APERTURE®.

During her time as an analytics intern at MJ, Molly spearheaded a project to organize client data, resulting in significant improvements in the efficiency of our analytics department. This invaluable experience, combined with her academic background, has shaped Molly into a proficient analyst with a profound understanding of uncovering claims data trends for diverse populations. Her data-driven mindset makes her an immense value add to our team.

Outside of the office, Molly enjoys hiking, watching movies, and cheering on her favorite NFL team, the Kansas City Chiefs. She also loves to explore the food scene in Phoenix and is always game for some Italian food. Aligned with her passion for exploring new places and experiences, traveling to all 50 states is at the top of Molly's bucket list!
